

MicroStrategy Desktop: Reporting Essentials

Overview:

This two-day course provides students with an overview of the extensive reporting capabilities of Desktop™. Participants will leave with an understanding of report creation and the numerous data and style report manipulations in Desktop, including auto-style creation, drilling, data pivoting, page-by, outline mode, grid and graph formatting, and thresholds. Additionally, participants will be versed in the creation of basic components that are essential in the creation of reports, including report filters, metrics, OLAP Services™ features, prompts, and searches. Students will also understand report design principles that leverage the capabilities of Desktop. All lectures will be reinforced with hands-on exercises.
